

# CA ACDIS WEBINAR

## Myocardial Infarction 4<sup>th</sup> Universal Definition: Tools for CDI, Coding, Physician Collaboration

Presented by:

- James Kennedy, MD, CCD, CDIP
- Susan Sweeney, RN, BSN, CCDS, CCS,
- Abhinav Goyal, MD, MHS, FACC, FAHA,
- Kelly Pechin, CCS

**Wednesday May 29  
11:00-12:30PM PDT**

It took a committee of cardiologists and other healthcare professionals from the European Society of Cardiology, the American College of Cardiology, the American Heart Association, and the World Health Federation four years to develop the 4<sup>th</sup> Universal Definition of Myocardial Infarction (MI).

This new definition poses no small difficulty for CDI and coding professionals as it emphasizes the term “myocardial” in nontraumatic circumstances, but ICD-10-CM only classifies the term as traumatic.

CDI professionals need to work with their cardiology and coding departments to ensure that patients are not mistakenly reported as having an acute MI when a physician documents myocardial injury. This program features experts from Emory University Healthcare in Atlanta, including Dr. Abhinav Goyal, who developed standardized practices for CDI engagement, education, and query efforts.

Join our expert speakers for this 90-minute webinar and learn how to work across disciplines to comply with the latest clinical definitions, as well as how to help the CDI team formulate effective queries for MI's.

**At the conclusion of this program, participants will be able to:**

- Define myocardial infarction (MI) using the 4<sup>th</sup> Universal Definition
- Determine best practices in developing clinical definition standards within a facility/healthcare system
- Collaborate with coding, CDI, and physician advisors to develop educational practices related to the new MI definition
- Understand financial implications related to inaccurate capture of MI
- Develop a process for adjudicating MI cases
